WASHING, RISING AND DRYING

Washing is the removal of stains from one's clothing through agitation in the aid of soaps, water detergents, bleach and stain removing agents.

After washing has been done to a cloth, rinsing follows. If involve the use of clean water to remove the soap-detergent-stain mixture from the clothes. The cloth is squeezed so as to facilitate the process.

Finally, we dry the clothes under the sun on a line, or in dryer.

How to wash your clothes

1. Sort your clothes into piles: before washing, one has consider the colour of one's clothes and also the fabric from which the clothes are made of. Separate white- and whitish- coloured cloths from non-white cloths. Also old faded clothe should be separated from new shiny clothes. Also separate cloths according to their fabric type, for example thick blanket should not be washed together with jeans trousers.
2. Fill a bucket with water: put as much water as you think is needed for the amount of clothes you have.
3. Add detergent to the water and agitate so that it foams.
4. Dip your clothes into the solution and let it for some minutes so as to absorb the detergent.
5. Agitate and scrub stains off the cloth. Some cloths have a very hard fabric, you could use a sponge to aid scrubbing of stains.
6. Rinse the cloth with clean water and then allow to dry under the sun.
