DICTIONARY

Dictionary is a book that contains words of a particular language and their meanings. It may also contain examples of the usage of the words it contains. Different languages have their own dictionary. For English dictionaries, I have seen the Chambers, Oxford Advanced Learners, and the Cambridge Longman dictionaries.

As an English Language student, I have really hound the English dictionary very resourceful. It has helped my spellings, writing, and pronunciation. I would show you how to use the dictionary to help your English language usage.

When you open the dictionary, you would see A, B, C, D, to Z at the edges of its pages. The letters tell what words are contained in such pages; whether thy begin with letter A, B, C, D… or Z. Then, you could just locate a word on the page. Right after the word you would see its pronunciation in between slashes. For instance: eat /i:t/. Thereafter, you would see its part of speech. Other things you would see are its meaning and correct usage. Dictionary is awesome to have and use. Thanks
