THE USE OF INSTRUCTIONAL MATERIALS

Instructional materials are objects or items used to help teach lessons in class. For instance, chalk and black/chalkboard are some of the instruments used in teaching.

Instructional materials are very important as they help the students assimilate the lesson faster and better. Every teacher ought to know how to improvise and use instructional materials in teaching.

Ways for improvising includes drawing, photographing, and sculpturing. Teachers ought to know how to make diagrams and sculptures basically.

Instructional materials are also sold in educational stores. Buying instructional materials is better as they last longer and are less messy to use, but for quick explanations improvisations is most appropriate.
