Applications Packages

Application packages are software packages used to resolve any special task other than the performance of the computer hardware and the management of other software. They are used basically to handle tasks such as office, graphics, browsing tasks, etc. Basically, application packages are used to process/manage texts, images, audio, video data and to share/browse files on networks.

Categories of Application Packages

For texts (i.e. words and numbers), we have word processing applications, spreadsheet applications, and mathematical/statistical applications.

For images (i.e. creative and constructive drawing and picture editing applications), we have CorelDraw, Adobe Illustrator, Adobe Photoshop, Inkscape, etc.

For audio (i.e. recording and producing applications), we have reason, cubase, fruity loops, LMMS, etc.

For video (i.e. recording and producing applications), we have movie maker, Adobe Aftereffect, Adobe Premiere Pro, OpenShot, etc.

For sharing and browsing, we have web browsers, network software, email clients, FTP clients, instant messengers, etc.

Notwithstanding, applications can also be categorized into special fields wherein they are applied. For instance: statistical applications, CAD (Computer Aid Design) applications, educational applications, etc.
