SETTING NUDGE DISTANCES

Nudging lets you move an object in increments by pressing the Arrow Keys. The increment value is known as the nudge distance. Micronudging lets you move an object by a fraction of the nudge distance. Super-nudging lets you move an object by a multiple of the nudge distance. By default, you can change this increment value to suit your needs. You can also change micronudge and supernudge values.

To set nudge distance

i. Click tools and then options.
ii. In the Decrement list of categories, Click Rulers.
iii. Type a value in the Nudge box.
iv. Type a value in one of the following boxes:
    - Supernudge
    - Micronudge

You can also set the nudge distance by deselecting all objects and typing a value in the Nudge offset box on the property bar.
