Images in Bootstrap

Bootstrap has special classes for working on images.

1. The .rounded class is used to add rounded corners to an image

```
<img src="cinqueterre.jpg" class="rounded"
alt="Cinque Terre">
```

2. The .rounded-circle class is used to shape the image to a circle.

```
<img src="cinqueterre.jpg" class="rounded-
circle alt="Cinque Terre">
```

3. The .img-thumbnail clas is used to shape the image to a thumbnail (bordered).

```
<img src="cinqueterre.jpg" class="img-
thumbnail" alt="Cinque Terre">
```

Aligning Images

Float an image to the right with the .float-right class or to the left with .float-left.

```
<img src="paris.jpg" class="float-left">
<img src="paris.jpg" class="float-right">
```

Centering Images

To center an image, we add the .mx-auto (margin: auto) class and .d-block (display: block) to the image.

```
<img src="paris.jpg" class="mx-auto d-block">
```

Making Images Responsive

To make images responsive we add the .img-fluid class to the <img> tag. The image will then scale nicely to the parent element.

The .img-fluid class applies max-width: 100% and height: auto; to the image.

```
<img class="img-fluid" src="img_chania.jpg"
alt="Chania">
```
