Styling Form Buttons

Buttons, like any form element can have a CSS style applied. In the code below, we've applied various styles to our form button:

```
#button1 {
    height: 30px;
    width: 180px;
    background-color: #820404;
    font-family:  Arial,  Helvectica,  sans-
serif;
    font-size: 18px;
    color: #ffffff;
}

#button1:hover {
    background-color: #cccccc;
}
```

Add an ID attribute to your button:

```
<input type="submit" value="Submit"
id="Button1">
```

You can also use images as buttons, if you like. But they need Javascript switched on in the

browser to make them work. The `type` to use is `image`:

```
<input type= "image" src="image_name.gif"
alt="alt text" onclick="submit_function">
```

If you're selling things on your site then image buttons may not be a good idea as some of your users won't see them.
