Html Button Tag

The <button> tag defines a clickable button. Inside a <button> element you can put text (and tags like <i>, , <br>, <img>, etc.) This is not possible with a button created with the <input> element!

Always specify the type= attribute for a <button> element, to tell browsers what type of button it is.

Attributes

1. Autofocus: specifies that a button should automatically get focus when the page loads.

```
<button autofocus="autofocus"></button>
```

2. Disabled: specifies that a button should be disabled.

```
<button disabled="disabled"></button>
```

3. Form: specifies which form the button belongs to.

```
<button form= "formId"></button>
```

4. Name: specifies a name for the button.

```
<button name= "submit"></button>
```

5. Type: specifies the type of button.

```
<button type= "submit"></button>
```

6. Value: specifies the initial value for the button.

```
<button value= "Submit"></button>
```
