HTML <PICTURE> TAG

The <picture> tag gives web developers more flexibility in specifying image resources.

The most common use of the <picture> element will be for art direction in responsive designs. Instead of having one image that is scaled up or down based on the viewport width, multiple images can be designed to more nicely fill the browsers viewport.

The <picture> element contains two tags: one or more <source> tags and one <img> tag.

```
<picture>
  <source media="(min-width: 650px)"
srcset=img_pink_flowers.jpg">
  <source media="(min-width:465px)"
srcset=img_orange_flowers.jpg">
  <img src="img_white_flower.jpg"
alt="Flowers" style="width: auto;">
</picture>
```

The <picture> tag also supports the Global Attributes and the Event Attributes in HTML.
