# HTML META HTTP-EQUIV ATTRIBUTE

The `http-equiv` attribute provides an HTTP header for the information/value of the content attribute. It can be used to simulate an HTTP response header.

## Attribute Values

1. content-security-policy: this specifies a content policy for the document.

```
  <meta http-equiv="content-security-policy"
content="default-src 'self'">
```

2. content-type: this specifies the character encoding for the document.

```
  <meta http-equiv="content-type"
content="text/html; charset=UTF-8">
```

3. default-style: this specified the preferred stylesheet to use.

```
  <meta http-equiv="default-style"
content="the document's preferred
stylesheet">
```

4. refresh: this defines a time interval for the document to refresh itself.

```
<meta http-equiv="refresh" content="300">
```
